

## ROBOTIC PICK & PLACE SOLUTIONS FOR YOUR CASE PACKING REQUIREMENTS

For your case packing projects, you are constantly faced with the following issues:

- ▶ Collation and gripping of complex products prior to loading
- ▶ High speeds
- ▶ Quick and frequent size changeovers
- ▶ Mid/long term developments in production

### ROBOTISATION OPENS UP NEW PROSPECTS

All types of pick & place arm

With the integration of all types of Scara or polyarticulated robots from renowned manufacturers in the field of packaging or numerical axis gantry packers designed internally, Cermex defines THE solution adapted to your current and future requirements.

This library of pick & place arms meets all your expectations:

- ▶ Handling of products in various natures, shapes and forms on a single machine, including flexible products (bags, doypacks, etc.)
- ▶ Reduction or elimination of mechanical parts for product collation, resulting in improved access as well as greater speed/ease in size changeovers
- ▶ Accurate movements and high speed
- ▶ Certain adjustments for size changeovers can be carried out directly by the robot (swapping of change parts, setting of mechanical stops, etc.)
- ▶ Machine versatility thanks to the intrinsic re-engineering possibilities of the robot concept

### FLEXIBILITY AT ALL LEVELS

RSC, wrap-around case, tray

Thanks to its expertise in robotic solutions and handling secondary packaging, Cermex is in a position to propose various alternatives on different levels:

#### a) Module principle:

- ▶ Single-function: collation/loading

- ▶ Multi-function: collation/forming/loading/gluing, as well as palletisation

#### b) Pick & Place arms:

- ▶ AN numerical axis [Gantry Packer](#) designed and manufactured by Cermex
- ▶ Delta robot
- ▶ Polyarticulated 6-axis robot

#### c) Packaging:

- ▶ RSC
- ▶ Complete wrap-around blank
- ▶ Tray with or without ledges
- ▶ 2-piece packaging: tray + lid...

### Robot Guiding by Vision System

The association of a robot and a vision system for higher performance:

- Do away with complex mechanical collating systems
- Ensure perfect product gripping
- Contribute to the correct positioning of the batch in the packaging
